Summary

Currently an Electrical Engineering college student at Institute Technology of Sepuluh Nopember located in Surabaya. A person who takes high interest in data science and machine learning field.

Skills

- **Programming:**
 - Python, JS, SQL, HTML, and CSS.
 - Git, GitHub.
- **Libraries/Framework:**
 - Front-End Side:
 - Bootstrap, Tailwind.
 - Data Analysis Field:
 - NumPy, Pandas, TensorFlow, PyTorch.

Understands how to prompt AI for greater uses at problem solving. Fluent in both Indonesian and English to support in a team projects.

Education and Certification

- **Bachelor Program**
Bachelor's degree – B.S., Electrical Engineering. Institute Technology of Sepuluh Nopember Surabaya.
- **Bangkit Machine Learning Path 2024 Graduates**
Graduated as a Machine Learning developer and got my ML and TensorFlow certification.
- **Udemy**
100 Days of Python
Course: A bunch of series of Python programming course, including projects, basic functions, development, etc.
- **MySkill**
Ms. Excel in MySkill.
Course: Mastering basic skills of Excel including pivot table, power pivot, and data visualization.
SQL for Data Analysis in MySkill.
Course: Learning the fundamentals of SQL that is required for data analyzing, manipulating table, etc.
- **Basic MATLAB**
Course: Learning the basics of MATLAB programming language.

Projects

- **JejakBatik's application (.app)**
Consist a team of cloud, ML, and android dev to create a fully functional Batik pattern recognition as a final project of Bangkit program. I created a neural network architecture to recognize it by leveraging the EfficientNetB0 as the base model. Refer to my GitHub for further information.
- **Autonomous drone navigation and obstacle avoidance using Deep Deterministic Policy Gradient (DDPG)**
Creating my final year project of drone navigation and obstacle avoidance using actor-critic network. Designing and implementing stablebaselines3 DDPG model into AirSim simulator for drone. Achieved model of ~77% accuracy where drone has high reward and accuracy in evaluation. Able to maneuver and reaches the goal efficiently.
